reliable and durable.

In the most demanding conditions of processing and manufacturing plants, customers require solutions that are

To be reliable means 'capable of being trusted - dependable.' To be durable means 'capable of withstanding wear and tear - long-lasting.'

When it comes to position sensing, reliability and durability are the perfect words to describe GO Switch leverless limit switches.

You see, GO Switches have a unique, hybrid design that combines the advantages of mechanical limit switches with the advantages of inductive proximity sensors - and leaves their drawbacks behind.

By combining the best of the two technologies, GO Switch enjoys a "double advantage," surpassing the capabilities that either technology could achieve by itself.

As a result, GO Switches deliver reliable, durable performance in demanding conditions that are too extreme for mechanical limit switches or inductive proximity sensors.

So if your plant processes include conditions that are extremely hot, cold, wet, dirty, corrosive, abusive, or explosive, be sure to demand technology with an advantage.

Specify GO Switch leverless limit switches.

experience + expertise

our expertise

Abusive Applications

Because GO Switches have only one moving part and no metal-to-metal contact making it move, there is virtually nothing to wear out! They are built to last for high cycle, dirty, and physically abusive applications.

Corrosive Conditions

Because most GO Switches have stainless steel housings, they are the logical choice for applications around salt water, bleaches, or other caustic chemicals.

Explosive Environments

Because GO Switches use dry contacts, they are 'simple devices' suitable for use in Intrinsically Safe applications. And many models are rated for Zone 1 Class I Division 1 hazardous areas.

High & Low Temperature

Because of their unique design, GO Switches can operate effectively in extremely hot (up to 400°F) or extremely cold (down to -40°F) plant conditions.

Shock & Vibration

Because GO Switches use permanent magnets that deliver outstanding snap action and contact pressure, they eliminate 'contact teasing' and 'contact chatter' in high vibration areas.

Washdown & Underwater

Because GO Switches are completely potted and sealed, no moisture can affect their operation. Some models are even rated for use 20,000 feet underwater!

Position Sensors 101

The purpose of position sensors

In automated manufacturing and processing plants, position sensors help monitor and control plant processes by confirming that critical activities are completed as intended. More specifically, their primary function is to detect the presence, or absence, of a moving object, or "target".

For the purpose of this tutorial, only "mainstream" technologies that sense the presence of metal targets – limit switches, inductive proximity sensors, reed switches, and leverless limit switches – will be discussed.

Limit Switches

Limit switches are electro-mechanical devices that detect the position of a target by making direct physical contact with the target.

ADVANTAGES

The advantages of mechanical limit switches:

- Do not require power
- Can handle high current loads
- Wide operating temperature range
- Immune to electrical noise
- Immune to radio frequency interference
- No leakage current
- No voltage drops
- Simple "Normally Open" or "Normally Closed"
- Not polarity or voltage sensitive

DISADVANTAGES

The disadvantages of mechanical limit switches:

- Multiple moving parts to maintain (lever arm, push button, body, base, head, contacts, terminals)
- Moving parts eventually wear and fail
- Physical contact encourages premature failure via damage
- Lever arm connection to internal contacts invites moisture and dust into contact chamber, causing failure or maintenance issues
- Poor repeatability due to wear and tear of moving parts
- Physical contact causes damage to the target
- Poor defense against moisture, dust, and corrosion
- Extra cost for sealed contacts and hazardous area approvals

Reed Switches

Reed Switches are electro-mechanical devices that detect the position of a magnetic target by the attraction of the target's magnetic field.

ADVANTAGES

The advantages of reed switches:

- No physical contact is required
- Do not require power
- Immune to electrical noise
- Immune to radio frequency interference
- No leakage current
- No voltage drops
- Simple "Normally Open" or "Normally Closed"

DISADVANTAGES

The disadvantages of reed switches:

- Require a magnetic target to operate
- Reed element is fragile and can break with physical contact
- High vibration can cause contact chatter and false signals
- Bending metal reeds causes fatigue and premature failures
- Contacts can be "teased" causing uncertainty of target position
- Limited selection of shapes, sizes, and capabilities

Key Terminology

When considering position sensors, it helps to understand the common terminology used by most sensor manufacturers.

Sensing range

the distance from the sensing face to the target that activates the switch

Hysteresis

the distance between the activated and release points of the switch

Repeatability

the switch's ability to detect the same target at the same range repeatedly during the life of the switch

Response Time

the amount of time between the detection of a target and the generation of the output signal

Inductive Proximity Sensors

Inductive proximity sensors are solid-state electronic devices that detect the position of metal targets via the disturbance of their energy field.

ADVANTAGES

The advantages of inductive proximity sensors:

- No physical contact is required
- No moving parts to jam, wear, or break results in less maintenance
- Large selection of shapes and sizes for a variety of applications
- Not affected by dust or dirt

DISADVANTAGES

The disadvantages of inductive proximity sensors:

- Require external power to operate
- Cannot handle high current loads
- Limited operating temperature range – cannot be used in extreme heat or cold
- Affected by temperature fluctuations
- Affected by electrical noise
- Affected by radio frequency interference
- Suffer from leakage current and voltage drops
- Only special models are intrinsically safe
- Only rare, expensive models are explosion proof
- Polarity sensitive – typically must stock both "npn" and "pnp" models
- Voltage sensitive – typically must stock both AC and DC models
- "Contact" sensitive – typically must stock both "Normally Open" and "Normally Closed" models
- Susceptible to moisture ingress

Leverless Limit Switches

Leverless limit switches use a unique, hybrid technology to detect the position of a ferrous target via an electro-magnetic field.

ADVANTAGES

The advantages of leverless limit switches:

- No physical contact is required
- Do not require power
- Only one moving part, with no metal-to-metal contact making it move – with nothing to jam, bend, break or wear out
- Can handle high current loads
- By far the widest operating temperature range
- Immune to electrical noise
- Immune to radio frequency interference
- No leakage current
- No voltage drops
- Simple "Normally Open" or "Normally Closed"
- Not polarity or voltage sensitive
- Can be wired in series or parallel
- Inherently intrinsically safe
- Large selection of shapes and sizes for a variety of applications
- Not affected by dust and dirt
- Not affected by moisture
- Not affected by physical contact
- Not affected by most caustics or chemicals
- Many explosion-proof options
- Water-proof and sub sea options
- Extended sensing ranges up to 4"

GO Switch Leverless Limit Switches

Unique Design Combines Three Technologies to Surpass Them All

The design behind GO Switch combines the best of all worlds, bringing together the advantages of mechanical limit switches, reed switches, and inductive proximity sensors to create a unique, hybrid technology that reaches new heights of performance.

By combining the best of three technologies, GO Switch enjoys a significant advantage, surpassing the capabilities that any of the three could achieve by itself.

As a result, the unique leverless limit switch design enables GO Switches to operate effectively under conditions that are too extreme for other technologies.

So if your plant processes include conditions that are extremely hot, cold, wet, dirty, corrosive, abusive, or explosive, be sure to demand technology with an advantage. Specify GO Switch leverless limit switches.

Abusive Applications

Because GO Switches have only one moving part and no metal-to-metal contact making it move, there is virtually nothing to wear out! They are built to last for high cycle, dirty, and physically abusive applications.

Explosive Environments

Because GO Switches use dry contacts, they are 'simple devices' suitable for use in Intrinsically Safe applications. And many models are available for Zone 1 Class I, Div 1 hazardous areas.

Corrosive Conditions

Because most GO Switches have stainless steel housings, they are the logical choice for applications around salt water, bleaches, or other caustic chemicals.

Washdown & Underwater

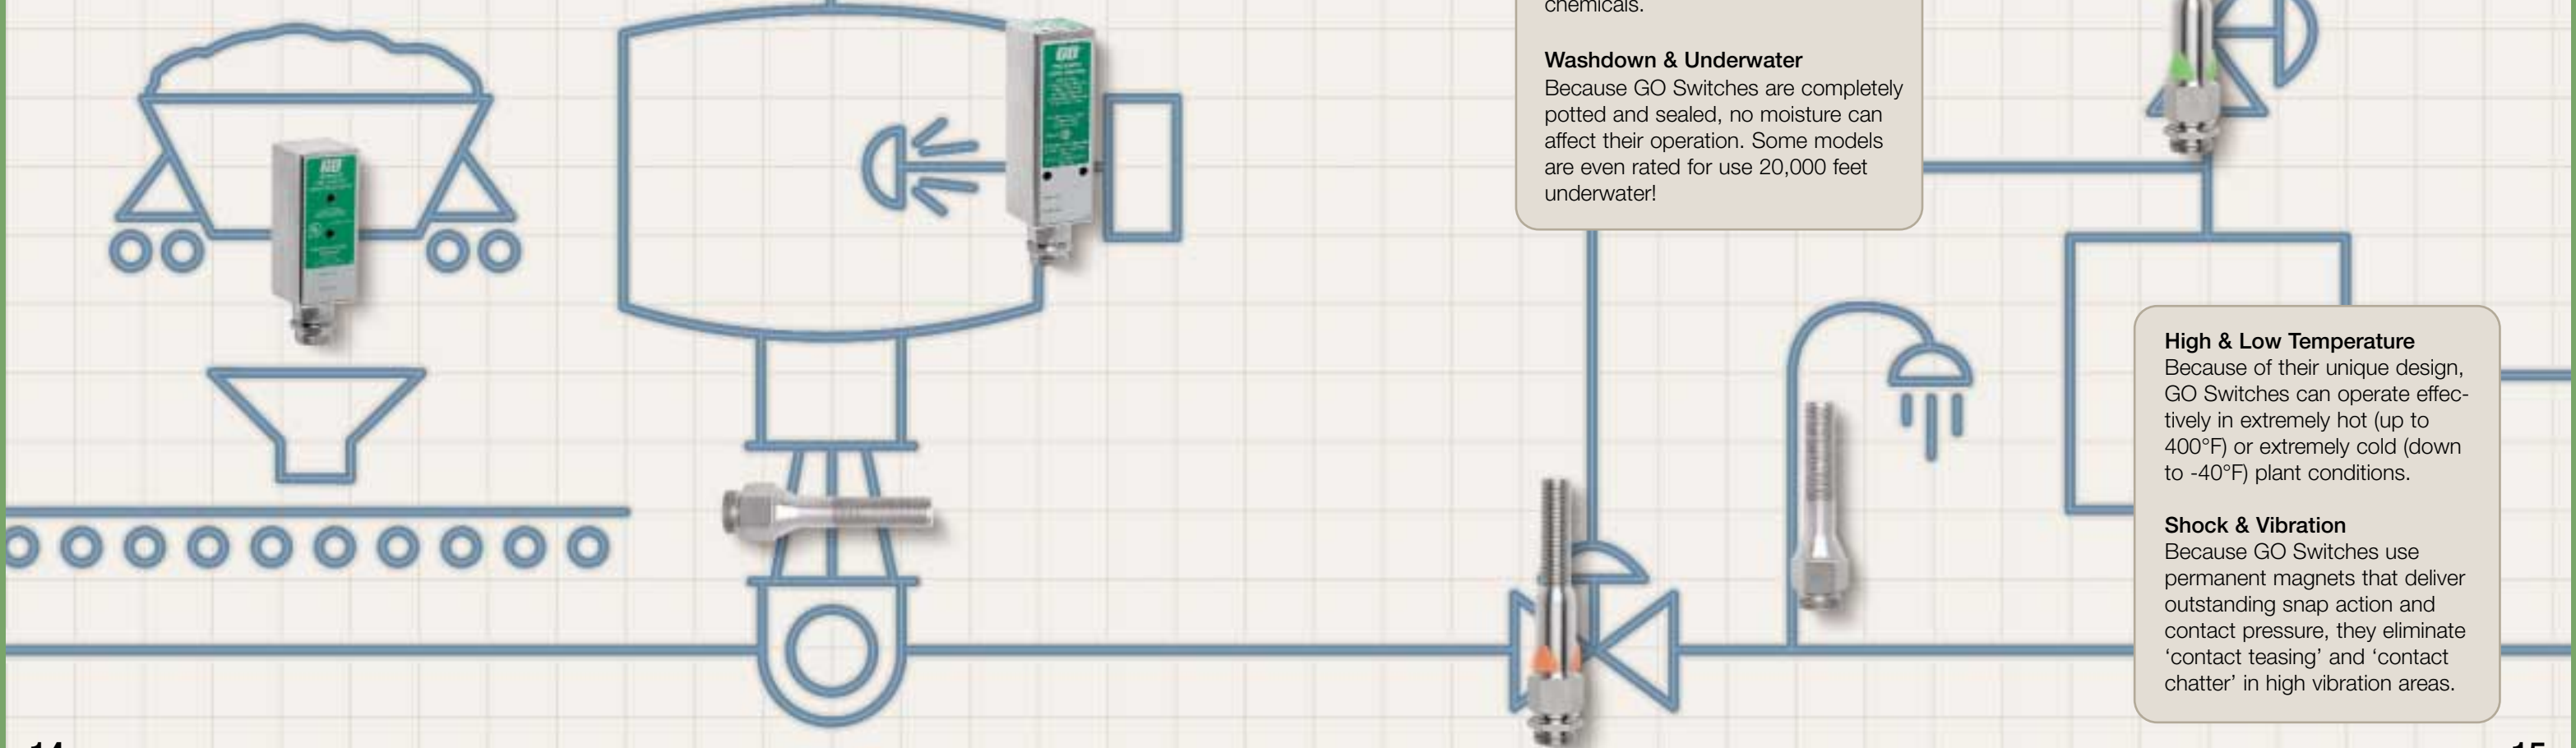

Because GO Switches are completely potted and sealed, no moisture can affect their operation. Some models are even rated for use 20,000 feet underwater!

High & Low Temperature

Because of their unique design, GO Switches can operate effectively in extremely hot (up to 400°F) or extremely cold (down to -40°F) plant conditions.

Shock & Vibration

Because GO Switches use permanent magnets that deliver outstanding snap action and contact pressure, they eliminate 'contact teasing' and 'contact chatter' in high vibration areas.

GO Switch Leverless Limit Switches

Unique Design Combines Three Technologies to Surpass Them All

The design behind GO Switch combines the best of all worlds, bringing together the advantages of mechanical limit switches, reed switches, and inductive proximity sensors to create a unique, hybrid technology that reaches new heights of performance.

By combining the best of three technologies, GO Switch enjoys a significant advantage, surpassing the capabilities that any of the three could achieve by itself.

As a result, the unique leverless limit switch design enables GO Switches to operate effectively under conditions that are too extreme for other technologies.

So if your plant processes include conditions that are extremely hot, cold, wet, dirty, corrosive, abusive, or explosive, be sure to demand technology with an advantage. Specify GO Switch leverless limit switches.

Abusive Applications
Because GO Switches have only one moving part and no metal-to-metal contact making it move, there is virtually nothing to wear out! They are built to last for high cycle, dirty, and physically abusive applications.

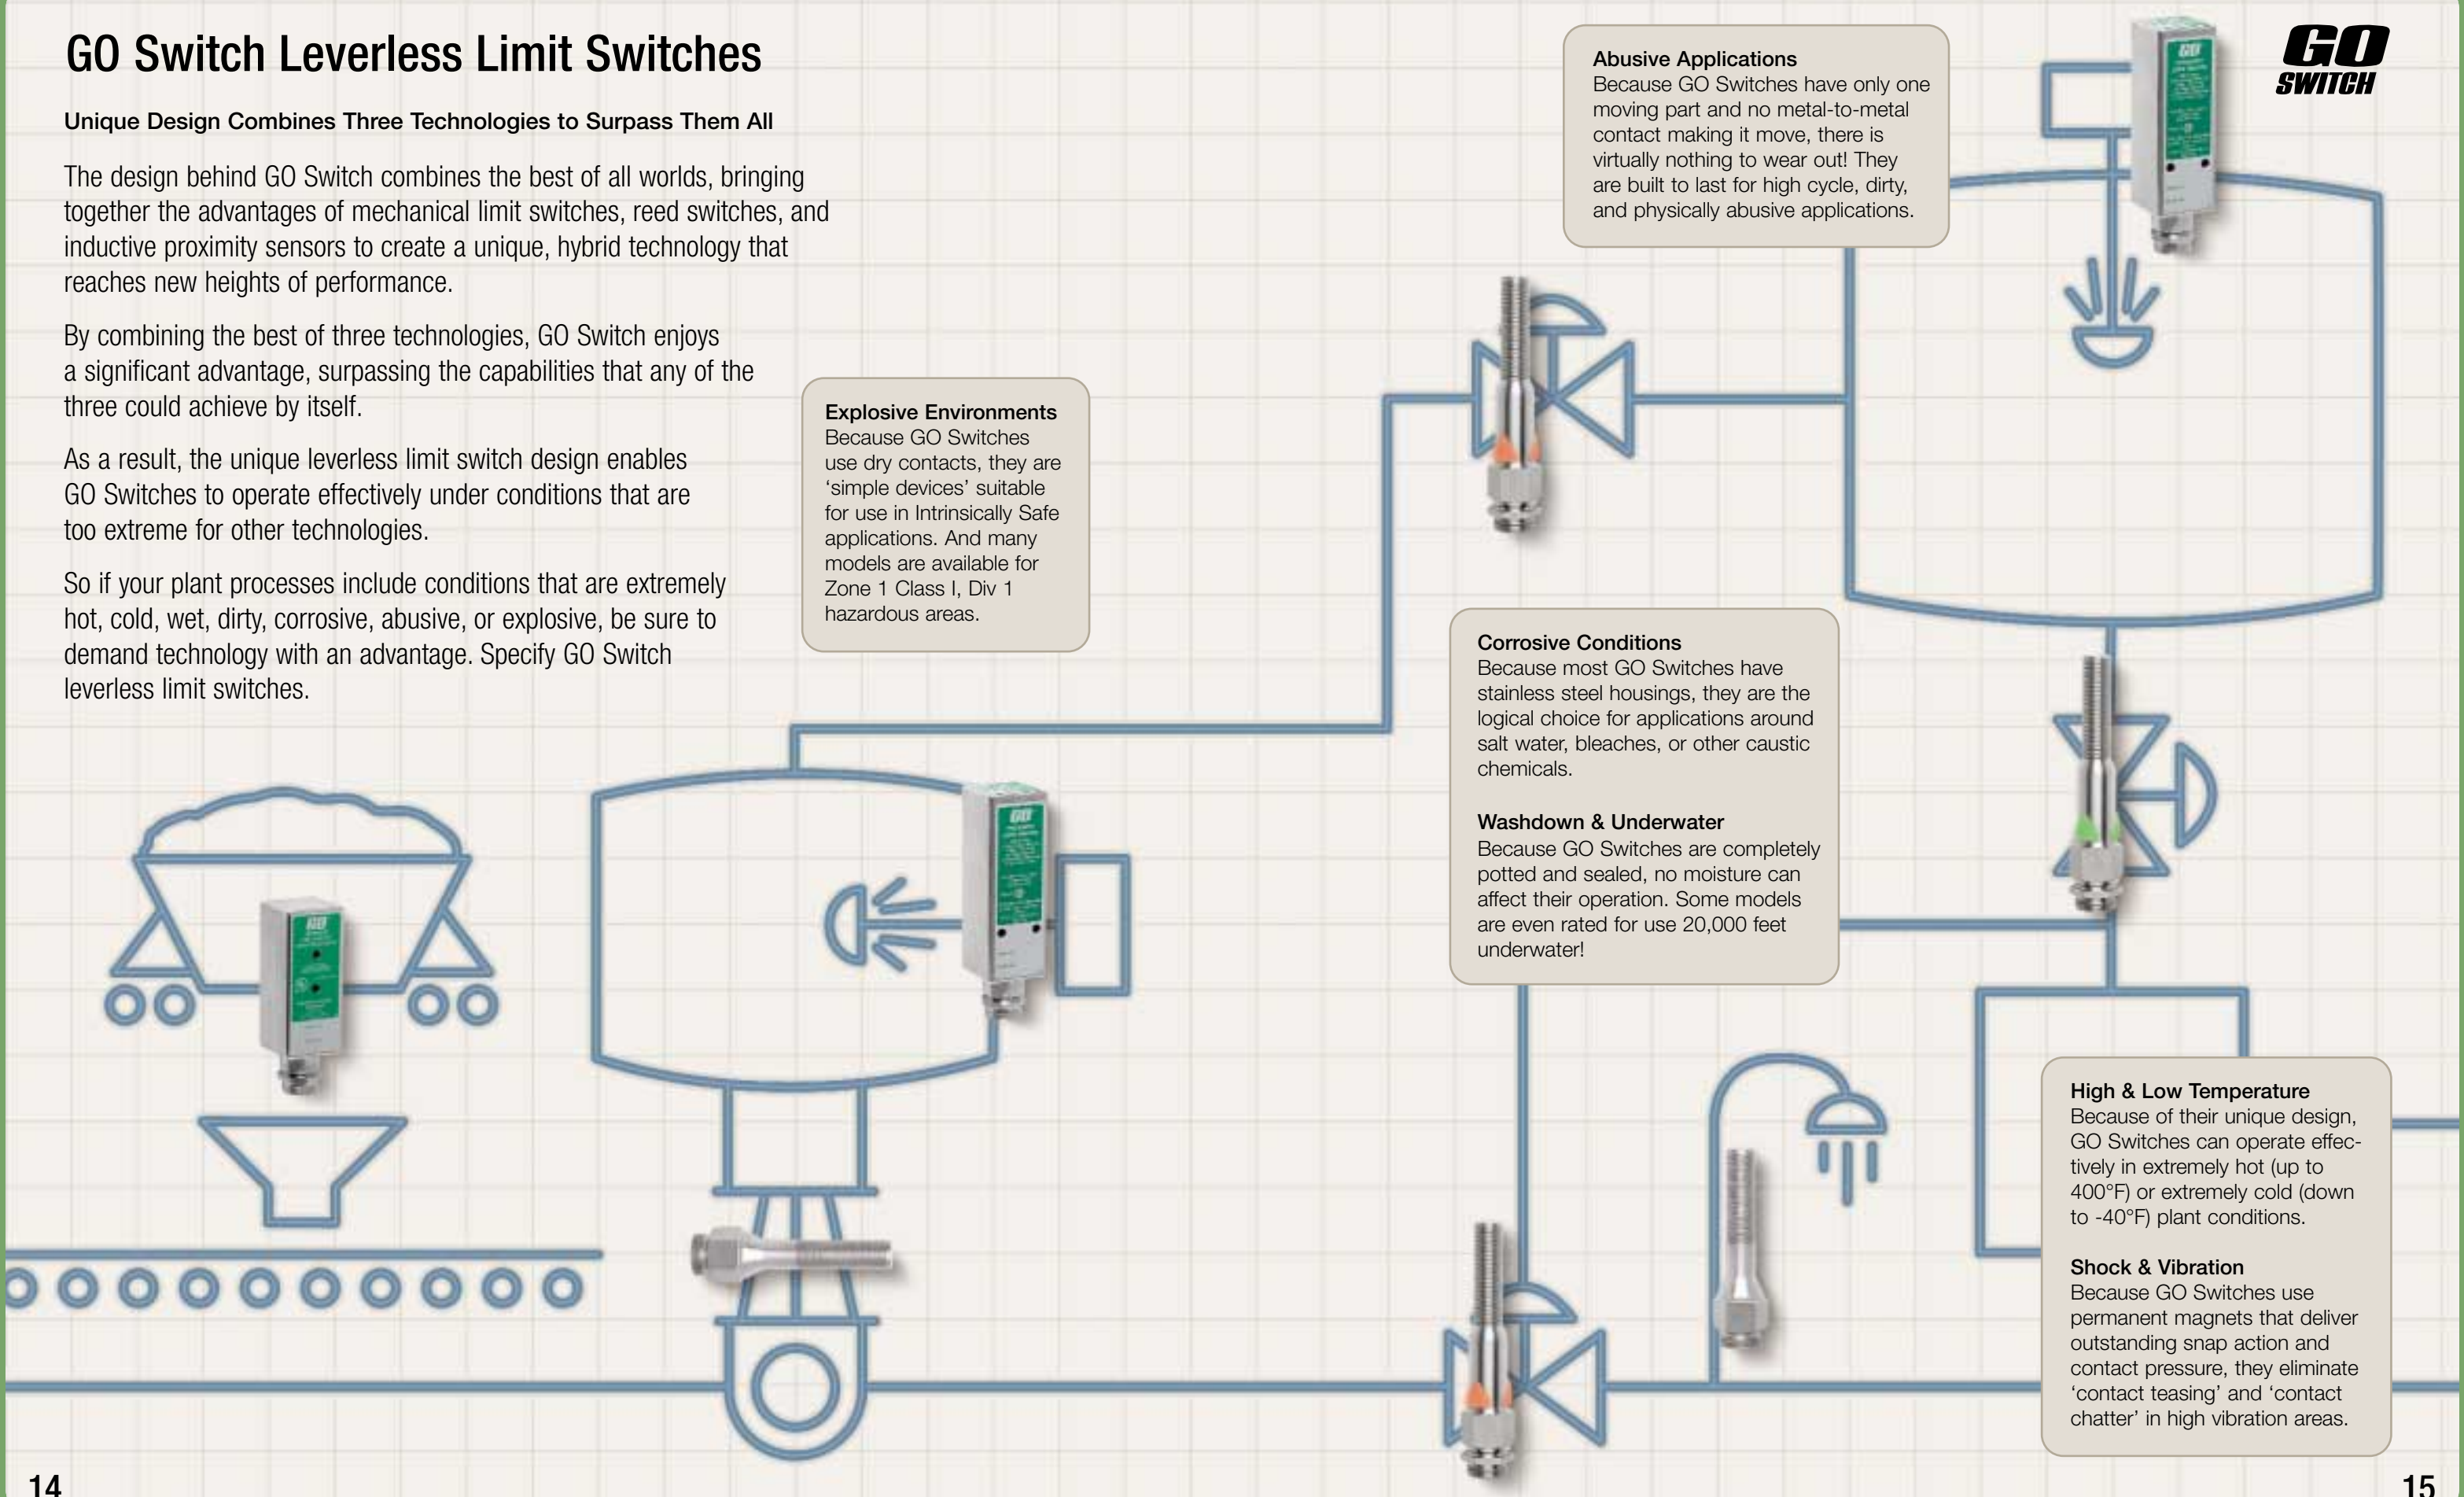

Explosive Environments
Because GO Switches use dry contacts, they are 'simple devices' suitable for use in Intrinsically Safe applications. And many models are available for Zone 1 Class I, Div 1 hazardous areas.

Corrosive Conditions
Because most GO Switches have stainless steel housings, they are the logical choice for applications around salt water, bleaches, or other caustic chemicals.

Washdown & Underwater
Because GO Switches are completely potted and sealed, no moisture can affect their operation. Some models are even rated for use 20,000 feet underwater!

High & Low Temperature
Because of their unique design, GO Switches can operate effectively in extremely hot (up to 400°F) or extremely cold (down to -40°F) plant conditions.

Shock & Vibration
Because GO Switches use permanent magnets that deliver outstanding snap action and contact pressure, they eliminate 'contact teasing' and 'contact chatter' in high vibration areas.

Square Sensors

TECHNOLOGY IN ACTION

10-20 Series

LEVERLESS LIMIT SWITCH

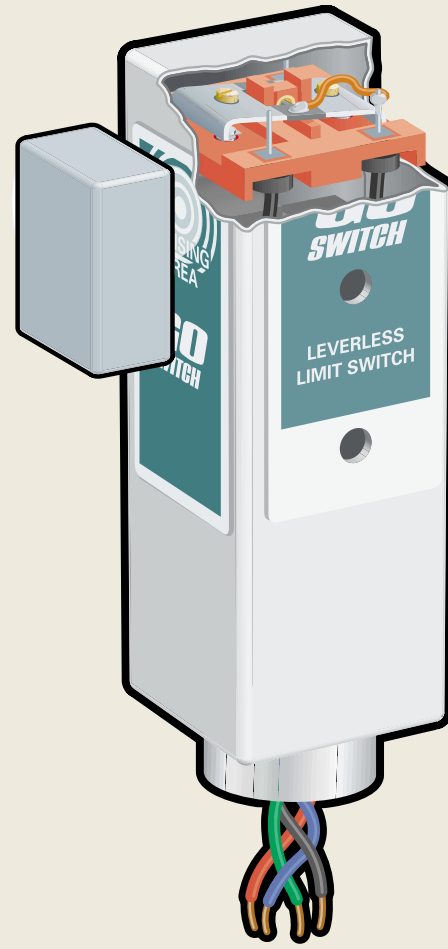

GO Switch 10 and 20 Series side sensing switches use two permanent magnets and a ferrous armature to control a set of dry contacts.

Unoperated

On the sensing side of the switch, one magnet is positioned closer to the armature, creating a dominant magnetic flux field which draws the armature down to its unoperated position, closing a contact circuit.

Shown: Model 11

Operated

When a ferrous target enters the sensing area of the switch, it diverts flux lines from the armature to create a magnetic dominance on the opposite side. As a result, the armature snaps to its operated position, closing the other contact circuit.

When the target is removed the armature snaps back to its original, unoperated position.

A LOOK INSIDE - MODEL 11

Options Available

- Explosion Proof
- Extended Sensing
- HiTemp™ to 350°F
- SubSea™ Submersible
- Latching

Key Benefits

GO Switches are simple and built to last.

With only one moving part and no metal-to-metal contact forcing it to move, there is nothing to wear out!

Models 11 and 21

GO Switch Models 11 and 21 are the world's original leverless limit switches.

Their simple design, rugged enclosures, long sensing ranges, and global approvals make these switches the ideal choice wherever reliable position sensing is needed.

Features:

- SPDT 10A contacts
- Side Sensing
- 40° to 221°F operating temperature

Options:

- Suitable for Zone 0, 1, or 2 explosion proof
- 40° to 350°F high temperature
- Quick disconnect connector
- Underwater capabilities

TECHNOLOGY IN ACTION

30-80 Series

LEVERLESS LIMIT SWITCH

GO Switch 30 and 80 Series end sensing switches use one permanent magnet and a ferrous armature to control a set of dry contacts.

Unoperated

The armature is positioned off-center of the magnet, creating a dominant magnetic flux field on the sensing end of the switch which draws the armature down to its unoperated position, closing a contact circuit.

Shown: Model 81

Operated

When a ferrous target enters the sensing area of the switch, it diverts flux lines from the armature to create a magnetic dominance on the opposite side. As a result, the armature snaps to its operated position, closing the other contact circuit.

When the target is removed the armature snaps back to its original, unoperated position.

A LOOK INSIDE - MODELS 35 & 81

Options Available

- Explosion Proof
- SPDT or DPDT
- HiTemp™ to 350°
- SubSea™ Submersible
- Hermetically Sealed

Key Benefits

GO Switches are simple and built to last.

With only one moving part and no metal-to-metal contact forcing it to move, there is nothing to wear out!

Models 31, 32, and 33

GO Switch Models 31, 32, and 33 offer end sensing in compact stainless steel enclosures.

Features:

- SPDT 6A contacts
- End Sensing
- 40° to 221°F operating temperature

Options:

- Suitable for Zone 0, 1, or 2 explosion proof
- Quick disconnect connector

Model 35

The GO Switch Model 35 leverless limit switch has set the standard for reliable performance in valve position monitors.

With its hermetically sealed contacts, low hysteresis, and superior resistance to vibration, moisture, contaminants, abuse, and temperature extremes, the GO Switch 35 clearly out performs any other sensor on the planet.

When ordering valve position monitors and switchboxes, be sure to specify "GO Switch inside."

Model 81

The GO Switch Model 81 offers end sensing and an optional Double Pole Double Throw contact arrangement. With its brass or stainless steel housings and global certifications, it is a popular choice around the world.

Features:

- SPDT or DPDT 10A contacts
- End Sensing
- 40° to 221°F operating temperature

Options:

- Suitable for Zone 0, 1, or 2 explosion proof
- 40° to 350°F high temperature
- Quick disconnect connector
- Underwater capabilities

Models 71 and 72

GO Switch Models 71 and 72 have the smallest diameters of any round leverless limit switch, and are used extensively in factory automation applications.

Features:

- SPDT 4A contacts
- Intrinsically Safe
- 40° to 221°F operating temperature

Options:

- Suitable for Zone 0, 1, or 2 explosion proof
- 40° to 400°F high temperature
- Quick disconnect connector
- English or Metric threads

Models 73 and 74

The GO Switch Model 73 is our most popular leverless limit switch. Its solid stainless steel construction and global certifications make it the ideal choice for a variety of applications. Model 74 is the same, less the conduit hub.

Features:

- SPDT 4A contacts
- Intrinsically Safe
- 40° to 221°F operating temperature

Options:

- Suitable for Zone 0, 1, or 2 explosion proof
- 40° to 400°F high temperature
- Quick disconnect connector
- Underwater capabilities
- English or Metric threads

Ordering Guide

Fill in the boxes to create your 'ordering number.'

Models 75, 76 & 77

GO Switch Models 75 and 76 are the same as models 73 and 74, only slightly longer with more thread surface and therefore more adjustability. Model 77 is the longest and largest option in the 70 series family.

Features:

- SPDT 4A contacts
- Intrinsically Safe
- 40° to 221°F operating temperature

Options:

- Suitable for Zone 0, 1, or 2 explosion proof
- 40° to 400°F high temperature
- Quick disconnect connector
- Underwater capabilities
- English or Metric threads

Models 7G, 7H & 7I

GO Switch Models 7G, 7H & 7I offer unique options such as hermetically sealed and Double Pole Double Throw contact arrangements in a variety of enclosures.

Features:

- SPDT or DPDT 4A contacts
- Intrinsically Safe
- 40° to 221°F operating temperature

Options:

- Suitable for Zone 0, 1, or 2 explosion proof
- DPDT 4A contacts
- 40° to 400°F high temperature
- Hermetically sealed contacts

New!

Model 7L GO Switch with LEDs

The new GO Switch Model 7L offers the same proven internals as our other 70 Series leverless limit switches, with the addition of Red or Green Britelite LEDs. The new 7L brings increased plant safety and awareness to the reliability of the 70 Series.

Features:

- 316 stainless steel enclosure
- Red or Green Britelite LEDs
- Leverless Limit Switch design

LPS: Linear Position Sensor

The Luminator LPS is specifically designed to provide position feedback on linear control valves and knifegate valves. Onboard Green or Red LEDs increase safety and awareness for plant operators.

- Features:
- 316 stainless steel enclosure
 - Green or Red BriteLite LEDs
 - Hermetically sealed sensors
 - Snap-action contacts

Model 7A Pneumatic Proximity Switch

The GO Switch model 7A is a unique pneumatic proximity switch. The 7A uses reliable leverless limit switch technology to operate a 3 way air valve at up to 100 PSI.

The GO Switch 7A is ideal for use as a cylinder position sensor in pneumatic cylinders, on many types of automated equipment, and in any hazardous areas where electrical signals should be avoided.

Features:

- Pneumatic proximity switch
- 3 way air valve
- 1.5 SCFM nominal flow rate
- Up to 100 PSI operation

Cylinder Position Sensors

TECHNOLOGY IN ACTION
Stroke-to-GO

LEVERLESS LIMIT SWITCH

GO Switch Stroke-to-GO® cylinder position sensors use three permanent magnets and push-pull plunger assembly to control a set of dry contacts.

Unoperated

The center magnet simultaneously attracts the primary magnet and repels the bias magnet, pushing the connecting rod backward. As a result, the common contact rests in its unoperated position, closing a contact circuit.

Operated

When the ferrous cushion of a cylinder enters the sensing area of the switch, it attracts the primary magnet, which pulls the connecting rod forward. As a result, the common contact snaps to its operated position, closing the other contact circuit.

When the target is removed the common contact automatically returns to its original unoperated position.

A LOOK INSIDE - MODEL 7C

Multiple wiring options:

- Lead Wires
- Cable
- Quick Disconnects

Potting fills the entire switch cavity, forming a **barrier against moisture.**

O-Ring seals in **pressures up to 3,000 PSI**

Three magnet design provides **snap action** and solid contact pressure, eliminating 'contact teasing' and 'contact chatter' in high vibration applications.

Probe lengths ranging from 1" to 5" ensure a proper fit to virtually any cylinder.

Permanent magnets never lose their strength, even when mounted on ferrous metal.

Bi-Color red and green LED position indicator increases safety and awareness for plant personnel.

360° rotatable head makes installation simple and easy.

Versatile gold flashed contacts are suitable for high and low electrical loads, and can be wired **AC or DC, N/O or N/C.**

All stainless steel construction makes this **the most durable cylinder position sensor in the world.**

Sensing face is stainless steel rather than plastic, and is therefore more suitable for high pressure hydraulic cylinder applications.

Options Available

- SPST or SPDT
- HiTemp™ to 400°F
- SubSea™ Submersible

Key Benefits

Stroke-to-GO cylinder position sensors are simple and built to last.

With only one moving part and no metal-to-metal contact forcing it to move, there is nothing to wear out!

Models 7C, 7D, 7E & 7F

With their solid stainless steel housings and leverless limit switch design, Stroke to GO switches have set the standard for reliability and durability in cylinder position sensing.

Features:

- SPDT 4A contacts
- Inherently Intrinsically Safe
- 40° to 221°F operating temperature

Options:

- 40° to 400°F high temperature
- Quick disconnect connector
- Underwater capabilities

Cylinder Position Sensors

Stroke-To-GO® Switches provide precise end-of-stroke position indication on pneumatic and hydraulic cylinders. Designed to exceed automotive industry standards, the housing is machined from stainless steel bar stock to handle pressures to 3,000 PSI operating (tested to UL's 3X burst requirement) while withstanding the extreme external conditions such as weld slag, coolants, cutting fluids, physical abuse and even high temperatures. Stroke-to-GO® Switches incorporate the same 70 Series GO® Switch mechanism that has been tested to over 200 million mechanical cycles and field proven in the most rigorous applications. This unique design offers the greatest benefits in cylinder indication.

Unique Features

Mechanical life:

>200,000,000 cycles

Leakage current:

Without LEDs - none

With LEDs - <1mA (SPST)

Voltage Drop:

Without LEDs - none

SPDT w/ LEDs - 1.0 volt

With LEDs - 2.8 volts (SPST)

Temperature drift: none

Washdown: designed to withstand 1,000 PSI washdown and NEMA 6P with Mini-Change® type connector option

Underwater: rated to 10,000 PSI with deep sea connector option

Weld Field Immune: tested and exceeded General Motors EHS-320 specifications. Testing Agency - Candid Logic

Radio Frequency Interference (RFI): no affect at any frequency

Application Considerations

- Cylinder cushion must be ferrous.
- Air gap between switch sensing face and cushion should be .015" to .040" (outside this range please consult factory).
- Largest diameter of target (cushion) should cover at least 75% of probe sensing face.
- Sensing face of Stroke-To-GO® Switch must be at least .125" from piston rod for proper switch reset. This may at times require an air gap distance greater than .040".
- For cushion diameters less than .50", air gap should be .015" to .025".

A two digit code is required for ordering the correct custom probe length. All Application Considerations below must be met. For any discrepancies please consult factory. Please follow these steps:

1. Measure dimension A from both ends of your cylinder or retrieve from specification drawings.
2. Locate the Min/Max range that dimension A falls within on the Custom Probe Length Chart.
3. Locate probe length requirement and Probe Code in the next two Columns to the right.
4. Enter the probe code into the corresponding spaces of the Stroke-To-GO® Part Number.

Application Considerations

- Cylinder cushion must be ferrous.
- Air gap between switch sensing face and cushion should be .015" to .040" (outside this range please consult factory).
- Largest diameter of target (cushion) should cover at least 75% of probe sensing face.
- Sensing face of Stroke-To-GO® Switch must be at least .125" from piston rod for proper switch reset. This may at times require an air gap distance greater than .040".
- For cushion diameters less than .50", air gap should be .015" to .025".
- Mounting hardware is 1/4"-20 grade 8 socket head cap screw (included).

EXAMPLE: If "A" = 2.900" then:

"A"		PROBE LENGTH	PROBE CODE
MIN	MAX		
2.890	2.915	2.875	J4

Dimension A is measured from the outside surface of the cylinder block to the Top Dead Center (TDC) of the ferrous cushion. Distance A may differ at each end.

Specialty Sensors

11 HiTemp™ Switch

The GO Switch Model 11 HiTemp™ leverless limit switches are rated for continuous operation at 350°F. With its classic design, the 11 is useful when long sensing ranges are needed, in applications such as automotive paint booths, conveyors, automated driers, and valve position monitoring on steam valves and other high heat applications.

Features:

- SPDT 10A contacts
- Side sensing to 3/8"
- Continuous operation at 350°F

Options:

- Sensing range to 3-3/8" with target magnet
- Mica glass lead wires rated over 842°F

81 HiTemp™ Switch

The GO Switch Model 81 HiTemp™ leverless limit switch is rated for continuous operation at 350°F. The 81 offers end sensing and an optional Double Pole Double Throw contact arrangement. The 81 is useful when redundant signals are required in applications such as automotive paint booths, conveyors, automated driers, and valve position monitoring on steam valves and other high heat applications.

Features:

- SPDT or DPDT 10A contacts
- End sensing to 5/16"
- Continuous operation at 350°F

Options:

- Sensing range to 3-7/8" with target magnet
- Mica glass lead wires rated over 842°F

Models 71 and 72

GO Switch Models 71 and 72 have the smallest diameters of any round leverless limit switch, and are used extensively in factory automation applications.

Features:

- SPDT 4A contacts
- Intrinsically Safe
- 40° to 400°F operating temperature

Options:

- English or Metric threads
- Mica glass lead wires rated over 842°F

73-74-75-76-77 HiTemp™ Switches

GO Switch Models 73, 75, and 77 HiTemp™ leverless limit switches are rated for continuous operation at 400°F, the highest rating of any position sensors on the market. These models are useful when precision sensing is required, in applications such as cylinder position sensing in automated paint booths, driers, and conveyors, and valve position monitoring on steam valves and other high heat applications.

Features:

- SPDT 4 amp contacts
- End sensing to 0.100"
- Continuous operation at 400°F

Options:

- Sensing range to .35" with target magnet
- Mica glass lead wires rated over 842°F

7G-7H-7I HiTemp™ Switches

GO Switch Models 7G, 7H, and 7I HiTemp™ leverless limit switches are rated for continuous operation at 400°F, the highest rating of any position sensors on the market. These models offer end sensing and an optional Double pole Double Throw contact arrangement. They are useful when precision sensing and redundant signals are needed, in applications such as cylinder position sensing in automated paint booths, driers, and conveyors, and valve position monitoring on steam valves and other high heat applications.

Features:

- SPDT or DPDT 4A contacts
- End sensing to .090"
- Continuous operation at 400°F

Options:

- Sensing range to .20" with target magnet
- Mica glass lead wires rated over 842°F

11/21 SubSea™ Switches

GO Switch Models 11 and 21 SubSea™ leverless limit switches are submersible to 434 feet. With their classic design, the 11 and 21 are useful when long sensing ranges are needed, in applications such as lock and dam gates, military hatch doors, ships and vessels, and offshore oil platforms.

Features:

- SPDT 10A contacts
- Side sensing to 9/16"
- Permanent submersion to 434 feet

Options:

- Sensing range to 3-3/8" (86mm) with target magnet
- Straight or right angle SubSea connector

81 SubSea™ Switch

The GO Switch Model 81 SubSea™ leverless limit switch is submersible to 434 feet. The 81 offers end sensing and an optional Double Pole Double Throw contact arrangement. The 81 is useful when redundant signals are required in applications such as lock and dam gates, military hatch doors, ships and vessels, and offshore oil platforms.

Features:

- SPDT or DPDT 10 amp contacts
- End sensing to 1/4"
- Permanent submersion to 434 feet

Options:

- Sensing range to 3-7/8" with target magnet
- Straight or right angle SubSea™ connector

73-75-77 SubSea™ Switches

GO Switch Models 73, 75, and 77 SubSea™ leverless limit switches are submersible to as deep as 23,000 feet. With their solid, one-piece stainless steel housings, there is no means for water to penetrate the contact chamber. These models are useful when precision sensing is required, in applications such as valve position monitoring, pig detection, pin placement detection, and cylinder position sensing on lock and dam gates, military hatch doors, ships and vessels, and offshore oil platforms.

Features:

- SPDT 4 amp contacts
- End sensing to 0.100"

Options:

- Optional submersion depth to 11,500 feet
- Optional submersion depth to 23,000 feet
- Sensing range to .35" with target magnet
- Straight or right angle SubSea connector

Model

- Repeatability:** .002" (.05mm) typical
- Response Time:** 8 milliseconds
- Differential:** Approx. .020" (.51 mm)
- Operating Temperature:** -40° to 221°F (-40° to 105°C)

✓ **73** Model 73
5/8" (16 mm) dia. x 3 5/8" (92 mm) long with 5/8"-18 UNF x 1 7/8" (48 mm) threads and 1/2" NPT conduit hub

73M Model 73
M18 x 1.5 external metric thread

✓ **75** Model 75
5/8" (16 mm) dia. x 4 5/16" (110 mm) long with 5/8"-18 UNF x 2 13/16" (71 mm) threads and 1/2" NPT conduit hub

75M Model 75
M18 x 1.5 external metric thread

77 Model 77
3/4" (19 mm) dia. x 5 13/16" (148 mm) long with 3/4"-16 UNF x 2 13/16" (71 mm) threads

Defender Turbine Trip Switch

In the power generation industry, reliability is a must. This is especially true when it comes to turbine control valves. But one of the more common difficulties in power plants is the typical limit switch arrangement on throttle, governor, intercept, and reheat stop valves. Conventional limit switches in this application are notorious for failing due to heat and physical abuse, and for falling out of tolerance and requiring readjustment.

TopWorx has solved this problem with the Defender turbine trip switch system. Made especially for turbine valves, the Defender is packed with up to 10 reliable GO Switch leverless limit switches, and is designed as a direct, drop-in replacement for existing OEM limit switches on Westinghouse or General Electric turbines.

Ordering Guide

Fill in the boxes to create your 'ordering number.'

Accessories

Quality-engineered connectors and cordsets make installation and maintenance a snap.

Standard designs are shown, with custom connectors available on special order.

Refer to the Wiring Options portion of each GO Switch Ordering Guide for detailed information.

Micro Change® Quick Disconnect

22 gauge (3 pin .23" dia.; 4 pin .25 dia.; 5 pin .26 dia.) molded PVC anodized aluminum shell rated 221°F (105°C) 300V

Available on all GO Switches

Mini Change® Quick Disconnect

16 gauge (3 pin .41" dia.; 4 pin .44" dia.; 5 pin .52" dia.; 7 pin .54 dia.) molded PVC anodized aluminum shell rated 221°F (105°C) 600V

Available on all GO Switches

Water Resistant Squeeze Connector

Stainless steel water resistant strain relief. Approx. 1" (25 mm) in length.

Available on GO Switch Models 72, 74, 76, 7C, 7D, 7E and 7F

High Pressure Right Angle SubSea Quick Disconnect

Overall length of connector is 2.85" (72 mm) X .65" (17 mm).

Available on 10, 20, 70, and 80 Series GO Switches

High Pressure SubSea Quick Disconnect

Molded Neoprene™ Quick Disconnect with Delrin™ lock-sleeves. Provides water-tight seal, safety and quick change-out. Overall length of connector is 2.9" (74 mm) X 1.23" (31 mm) dia.

Available on 10, 20, 70, 80 Series and Stroke to GO Switches

New!

Connection Heads by Minco Products, Inc.

TopWorx offers connection heads from Minco Products, Inc. suitable for use with any GO Switch. There are three base models available. A 4, 4X rated aluminum with epoxy coating, a 316 stainless steel version, and an aluminum with epoxy coating certified EEx d IIc Zone 1.

These units are being offered as an accessory to our GO Switch product line, but may also be certified as an assembly under a special quote number.

Consult factory for details.

Class I Div 2 Quick Disconnect Guard **New!**

NXS-4101 Guard fits all molded mini-change cordsets. Prevents against mechanical separation of male/female connectors and is **suitable for use in CI I Div 2 applications.**

Watertight Cable Gland **New!**

A-GLD1	3 or 4 conductor SO cable
A-GLD2	3 or 4 conductor PVC cable

Plastic cable gland is easy to install on any stainless steel GO Switch with a 1/2" conduit hub using the "B" cable termination option. It provides a water-tight seal rated to IP 68 - 5 bar (comparable to NEMA 6) and is an excellent way of protecting all GO Switches in wet environments. Not suitable for use with conduit.

SubSea™ Underwater Cordsets

(Specify length of cable (ft.) required.)
(e.g. 3ED20 = 3 pin and 20 ft. of cable)

A-3ED__	3 pin female connector with Delrin™ lock sleeve and minimum 12 ft. (610 mm) of 16 gauge (3 pin .395" dia.) SO cable rated 194°F (90°C) 600V (certified not to leak underwater)
A-4ED__	4 pin female connector with Delrin™ lock sleeve and minimum 12 ft. (610 mm) of 16 gauge (4 pin .425" dia.) SO cable rated 194°F (90°C) 600V (certified not to leak underwater)
A-8ED__	8 pin female connector with Delrin™ lock sleeve and minimum 12 ft. (610 mm) of 16 gauge (8 pin .645" dia.) SO cable rated 194°F (90°C) 600V (certified not to leak underwater)
A-3EE__	3 pin right angle female connector with minimum 12 ft. (610 mm) of 16 gauge (3 pin .395" dia) SO cable rated 194°F (90°C) 600V (certified not to leak underwater)
A-4EE__	4 pin right angle female connector with minimum 12 ft. (610 mm) of 16 gauge (4 pin .425" dia) SO cable rated 194°F (90°C) 600V (certified not to leak underwater)

Aura™ Light Adapter

The Aura Light Adapter provides LED position confirmation on any N/O GO Switch using a 3, 4, or 5 pin Mini-Change connector.

Over the years, customers have asked us to mount our GO Switch leverless limit switches to just about every type and brand of valve and actuator on the planet.

As a result, TopWorx has amassed over 1,200 different mounting kit designs.

So whether your valve application is rotary or linear, NAMUR or non-NAMUR, in production or obsolete, TopWorx is sure to have a mounting kit that fits your need.

Valve and Actuator Manufacturers

Annin	Foxboro	Pacific Valves
Apollo	General Torque	Parker Hydropower
Autoclave	General Valve Company	Pliaxseal
Automax	Grinnel Corporation	Posi-Seal
Axelson	Hills McCanna	Pratt, Henry
Badger Meter	Honeywell	Ramcon
Bettis	Hycon Actuators	Raymond Control Systems (RCS)
Bray	Hytork	Remote Control
Brooks	ITT Compactorque	Research Control Valves
BV&B Valves	ITT Engineered Valves	Rockwell, McCannaseal
Cameron	ITT Grinnell	Rockwell, Ramcon
Centerline	ITT Barten	Rotork
Century	Jamesbury	Saunders Valve
Clarkson	Kamyr	Schuf Valve
CompacTorque	Keystone	Serk-Audco
Conbraco	Kielely & Mueller	Shafer Actuators
Contromatics	Kinetrol	SVF
Cooper Valve	KTM-General Torque	Taylor Instrument
CPV Mfg.	LeDeen Actuators	TK Valve
Dahl, G. W.	Limitorque	Tork-Pak
Demco	Magnetrol	Tuffline
DeZurik	Marpac	Unitorq
Dover	Masonellan-Dresser	Valtek
Dresser	Mastergear Gear Operators	Velan
Durco	Matryx	Walworth
Dynatorque	McCannaseal	Watts Regulator
Elliott, Kenneth	Mercoid Liquid Level	Whitey Valves & Actuators
El-O-Matic	Controls	WKM Dynaseal Actuators
Execco Gear Operators	Metrodyne	Worcester Controls
Fabri Valve	Morin Actuators	Xomox
Fisher Controls	Neles Automation	
Flexible Valve Company	Orbit Valve	

Control Valves

NAMUR Mounting Kits

The vast majority of rack and pinion valve actuators come with an ISO/NAMUR mounting pattern. This worldwide standard provides a consistent bolt pattern and shaft height regardless of the actuator brand. As a result, there is less need for expensive, custom made mounting kits, making it easier and less expensive to mount topworks accessories.

TopWorx offers several cast aluminum and stainless steel mounting kits that make it easy to attach GO Switch 70 Series switches to rack and pinion actuators.

Custom (Non-NAMUR) Mounting Kits

Rotary valve actuators that do not use the ISO/NAMUR standard, such as scotch-yoke or vane actuators, require custom designed mounting kits to attach GO Switches.

This can be a complex procedure that should not be overlooked by the end user. Since there are no standards, it is more difficult to ensure the proper fit and function of brackets, and consequently the automated valve system itself.

TopWorx has a team of designers experienced at solving this problem, making it easy to mount GO Switch products to scotch-yoke and vane actuators. With an existing library of over 1,200 different designs, there is probably already a design ready for your application.

Note: TopWorx custom mounting kits are always made of heavy-gauge stainless steel, ensuring the proper amount of support in the field.

Linear Valve Mounting Kits

Linear valves, such as control valves, globe valves, knifegate valves, or diaphragm valves, do not conform to any standard mounting patterns. Therefore, custom designed mounting kits are necessary to attach GO Switches.

Since TopWorx has been mounting GO Switch leverless limit switches onto linear valves and actuators for several decades, there is probably already a design ready for your application - if not, we will create one.

Installation

Installation Principle - Square Switches

- Non-ferrous brackets/plates are recommended (stainless steel or aluminum).
- GO Switches may be mounted on ferrous materials but it is not recommended. Loss of sensing range will result.
- It is recommended to mount switches 1" to 1-1/2" away from surrounding ferrous materials when possible.
- If mounting on ferrous material, insure uniform coverage of the switch, biasing the internal magnet(s) equally. (Fig. 2) If magnets are biased unequal, latching may occur. (Fig. 1)
- GO Switches sense ferrous materials such as mild steel, 400 series and 17/4 stainless steel.
- Avoid contact between target and switch. Configure mounting of switch and/or target so that target passes within proximity range of sensing area. Sensing range will vary according to model number and size (mass) of target used.
- Target magnets, available through TopWorx, will increase the sensing range of the switch. Reference sensing ranges in corresponding sections throughout the catalog.
- For optimum performance, provide sufficient mass of target, and choose the appropriate GO Switch model to match the application requirements for operating frequency, type of load, etc.
- The greater mass of target the better for maximum contact pressure, especially in low current applications.
- For heavy or inductive loads, arc suppression devices, or interposing relays are recommended for contact longevity. Contact factory for specifics.
- GO Switches may be mounted in any plane.
- When mounting GO Switches side by side, place 2-1/4" apart edge to edge, not center to center.
- Contact factory for side by side mounting.

See individual switch Ordering Guides for wiring diagrams and information on external target magnets for increased sensing ranges.

Attachment of Conduit or Cable

- Attach conduit or cable correctly
 - When using long runs of conduit or cable, place supports close to the switch to avoid pulling switch out of position.
 - If switch is mounted on a moving part, be sure flexible conduit is long enough to allow for movement, and positioned to eliminate binding or pulling.
 - For installation in hazardous locations, check local electrical codes. Switches must be installed according to local electrical codes.
 - In damp environments, use 1/4" thick non-conductive RTV or a similar moisture barrier to prevent water/condensation from entering conduit hub

Satisfy these 3 criteria to reduce possible premature failures

Sealing switches

In figure 1 something common has occurred; the conduit system has filled with water. Over a period of time this may cause the switch to fail prematurely.

In figure 2, the termination of the switch has been filled with 1/4" thick non-conductive RTV to prevent water intrusion and to prevent premature switch failure. A drip loop with provision for water to escape has also been installed.

Figure 1

Figure 2

Target size

In figure 3, the ferrous target is too small to be detected reliably.

In figure 4, the target has sufficient size and mass for long term, reliable operation.

Figure 3

Figure 4

Target location

In figure 5, the target has been positioned to stop on the outside edge of the sensing range. This is a marginal condition for long term reliable operation.

In figure 6, the target has been positioned to stop well within the sensing range which will assure long term reliable operation.

Figure 5

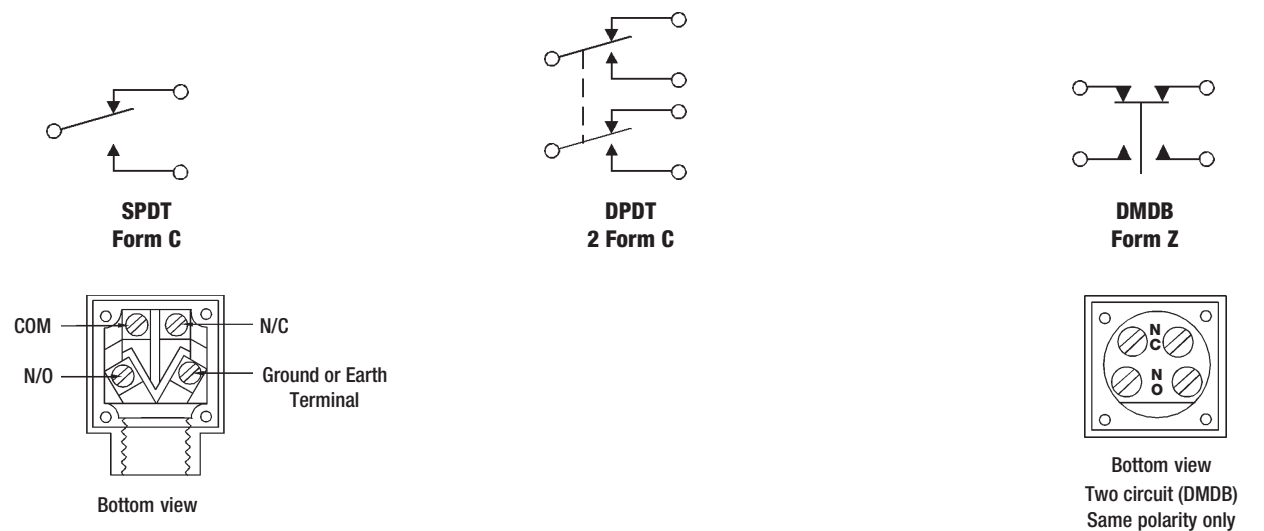

Figure 6

ATTENTION!

Please refer to individual switch sections for wiring diagrams.

Contact arrangements vary according to type of switch. Refer to sections on each switch series for detailed information. Be sure that electrical load will not exceed rated capacity of the switch. For two-circuit switches (DMDB), contacts must be connected same polarity only in order to minimize possibility of a line-to-line short.

All GO® Switches are "pure" contact switches, meaning that they have **no voltage drop when closed, nor do they have any leakage current when open.** For multi-unit installation, switches may be wired in series or parallel, as shown below.

Series and Parallel Wiring

Series Wiring

Any number of GO® Switches may be wired in series, without voltage drop. By contrast, conventional solid state switches have about two volts drop across the switch when operated. With a system of 12 volts and four switches in series, 8 volts is dropped across the switches and only 4V is left to operate the load. When using GO® Switches, 12V is still available to operate the load.

Parallel Wiring

Any number of GO® Switches may be wired in parallel, with no current leakage and without drawing operating current.

When conventional solid state switches are wired in parallel, there is about 100 microamps leakage through each switch. If ten switches were wired in parallel, the total leakage current would be 1000 microamps or one milliamp - sufficient current to indicate an "ON" condition to a programmable logic controller (PLC).

No Voltage Drop with GO® Switches

No Current Leakage with GO® Switches

Setting Up A 70 Series GO®Switch For Optimum Performance

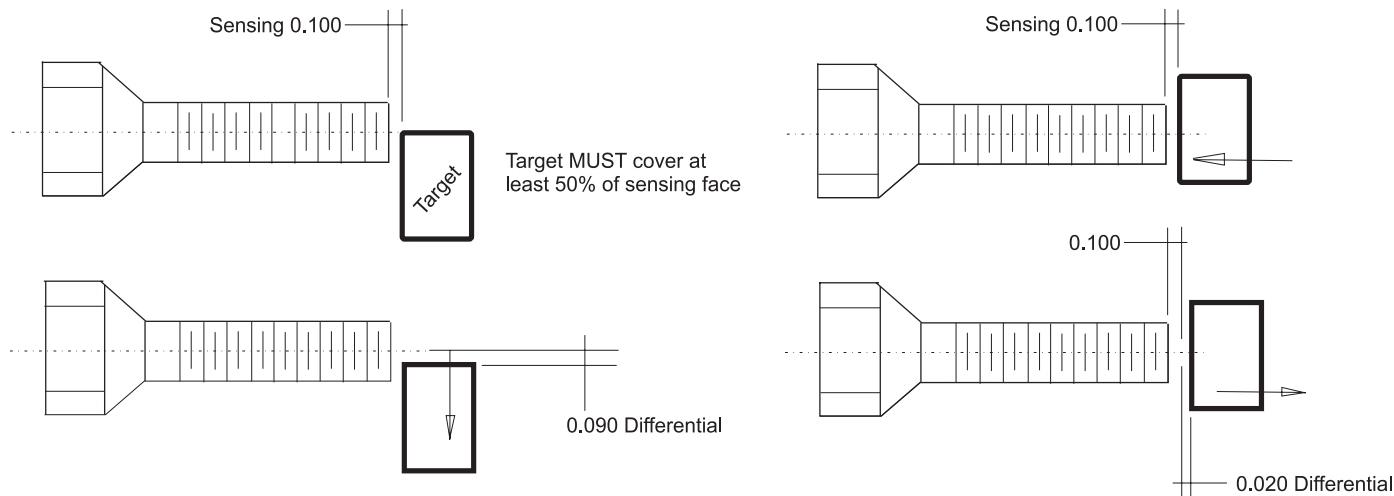

GO Switch 70 Series end sensing switches use three permanent magnets and a push-pull plunger to control a set of mechanical contacts. The center magnet simultaneously attracts the primary magnet and repels the bias magnet, pushing the connecting rod and common contact into the normally closed position, closing a contact circuit. When a ferrous or magnetic target enters the sensing area of the switch, it attracts the primary magnet, which pulls the connecting rod and common contact into the normally open position, closing the other contact circuit.

The **sensing distance** is the maximum distance between the switch and target when the switch first operates; the trip point. The **differential**, also known as deadband or hysteresis, is the distance that the target must move from the sensing area in order to allow the switch to reset.

The internal mechanism is shown here:

To apply the 70 Series GO Switch to obtain the least differential, the direction the target approaches the switch must be considered. Below are two possible orientations that illustrate the differences in target movement and the affects on switch differential.

The measurements shown are nominal and can vary as much as .030-.050" depending on the material and size of target used in the application. As you can see, the best scenario for least differential is to orient the switch and target as shown in **Orientation B**. However, in this application, the possibility of getting debris between the switch and target must also be considered.

When trying to determine differential of an application, it is directly proportional to the distance the target will travel in the application. For example: a linear valve stroke is 1". A switch is applied to indicate the closed position of the valve. Using **Orientation A**, the differential is 0.090 ". The 'deadband' is therefore 9% of travel. If the switch were re-oriented, as shown in the **Orientation B**, the deadband would be only 2% of the total valve travel.

Remember, there is no exact science to use when applying a GO Switch. However, once the switch is set, and the target travels to the same position every time (within .002"), the GO Switch will maintain calibration for life. **Set it and forget it!**

Installation Principle - Round Switches

- 70 Series GO Switches are inherently shielded, and are **unaffected by surrounding ferrous material, weld fields and RF interference**.
- GO Switches sense ferrous materials such as mild steel, 400 series and 17/4 stainless steel.
- Sensing and differential of switch may vary depending on target travel direction.
- Avoid contact between target and switch. Configure mounting of switch and/or target so that target passes within proximity range of sensing area. Sensing range will vary according to model number and size (mass) of target used.
- Target magnets, available through TopWorx, will increase the sensing range of the switch. Reference sensing ranges in corresponding sections throughout the catalog.
- For optimum performance, provide sufficient mass of target, and choose the appropriate GO Switch model to match the application requirements for operating frequency, type of load, etc.
- The greater mass of target the better for maximum contact pressure, especially in low current applications.
- For heavy or inductive loads, arc suppression devices, or interposing relays are recommended for contact longevity. Contact factory for specifics.
- Do not use excessive force on external threads when installing. (36 in/lbs. max)
- Configure mounting so bracket dissects switch as close to the middle of the length of body as possible (Fig. 1). This eliminates undue stress caused by heavy cables, connectors, etc.
- Two appropriately sized jam nuts are included with switch. Lock washers are recommended in high vibration applications.

See individual switch Ordering Guides for wiring diagrams and information on external target magnets for increased sensing ranges.

For cylinder applications, see pg. 65 for set up recommendations.

Figure 1
Mount as close to mid-point of length of switch

Pressure Sealing Methods

GO Switch recommends the use of our Parker ThredSeal® Washer Kits in lieu of other commercially available sealing hardware. Provided with the Parker ThredSeal® Washer Kit are torque values for specific pressure ratings as well as the maximum torque values.

Models 73-76 - 5/8" Diameter

Torque Jam Nuts to:
 15 lbs-ft to achieve seal at 2,000 PSI
 25 lbs-ft to achieve seal at 5,000 PSI
 Do not exceed 30 lbs-ft

Models 71 & 72 - 3/8" Diameter

Torque Jam Nuts to:
 15 lbs-in to achieve seal at 2,000 PSI
 30 lbs-in to achieve seal at 5,000 PSI
 Do not exceed 45 lbs-in

Model 77 - 3/4" Diameter

Torque Jam Nuts to:
 20 lbs-ft to achieve seal at 2,000 PSI
 65 lbs-ft to achieve seal at 5,000 PSI
 Do not exceed 75 lbs-ft

Air and Hydraulic Cylinders

A ferrous cylinder cushion or piston will actuate the switch.

To determine the correct thread length, measure the distance from the head cap surface to the cushion and add 1/2" for seal nut. 70 Series are rated 2,000 PSI operating pressure; 5,000 PSI operating and 10,000 PSI non-shock optional on models 73 through 77.

Thread seal nut onto switch. Screw switch into cylinder by hand until switch touches cushion. Back out 1/4 to 1/2 turn. Tighten seal nut.

- 70 Series GO® Switches are unaffected by surrounding ferrous steel.

Factors Affecting Contact Life

GO Switches are designed to provide optimum performance over a long period. Their premium grade components and inherently durable design keeps them working, trouble-free, year after year. Some of the conditions that can decrease contact life are:

Contact Erosion

There are two types of contact erosion, mechanical and electrical. Electrical contact erosion is caused by heavy electrical loads. The contacts may overheat and become molten if there isn't sufficient off time to allow cooling between cycles. Mechanical erosion occurs as a result of friction between contacts cycling at high speeds with little or no electrical load. Mechanical wear can also occur due to operating a switch at a frequency higher than its design capability. The high operating speed of GO Switches make them ideal for almost any application. For those with unusually high-frequency switching demands, please consult factory.

Electrical wear caused by arcing, can be eliminated by utilizing high quality contact materials, such as the gold-flashed silver cadmium oxide used in GO Switches, and by operating the switches within the voltage parameters for which they are designed. The use of arc suppressors such as resistor-capacitor combinations or blowout coils can also serve to prevent arcing, a consideration which is particularly important in certain hazardous operating environments.

Contact Transfer

When switches are operated above rated voltage or at high speeds, contact material can transfer from one contact to the other. For this reason, it is important to observe the input voltage specifications supplied for each GO Switch.

Welding or Sticking

The GO Switch design virtually eliminates welding or sticking due to mechanical armature hang-ups. Excessive voltage and the resultant arcing, however, can cause overheating of the contacts and welding or sticking. By operating the GO Switch within its specified parameters, this problem can be eliminated.

Definitions as referenced by NEC Article 100

Ampacity

The current, in amperes, that a conductor can carry continuously under the conditions of use without exceeding its temperature rating.

Approved

Acceptable to the authority having jurisdiction.

Bonding

The permanent joining of metallic parts to form an electrically conductive path that will ensure electrical continuity and the capacity to conduct safely any current likely to be imposed.

Bonding jumper

A reliable conductor to ensure the required electrical conductivity between metal parts required to be electrically connected.

Device

A unit of an electrical system that is intended to carry but not utilize electric energy.

Disconnecting

A device, or group of devices, or other means by which the conductors of a circuit can be disconnected from their source of supply.

Dustproof

Constructed or protected so that dust will not interfere with its successful operation.

Dusttight

Constructed so that dust will not enter the enclosing case under specified test conditions.

Enclosure

The case or housing of apparatus . . . to prevent personnel from accidentally contacting energized parts, or to protect the equipment from physical damage.

Explosionproof apparatus

Apparatus enclosed in a case that is capable of withstanding an explosion of a specified gas or vapor that may occur within it and of preventing the ignition of a specified gas or vapor surrounding the enclosure by sparks, flashes, or explosions of gas or vapor within, and that operates at such an external temperature that a surrounding flammable atmosphere will not be ignited thereby.

Ground

A conducting connection, whether intentional or accidental, between an electrical circuit or equipment and the earth, or to some conducting body that serves in place of the earth.

Grounded

Intentionally connected to earth through a ground connection or connections of sufficiently low impedance and having sufficient

current carrying capacity to prevent the buildup of voltages that may result in undue hazards to connected equipment or to persons.

Labeled

Equipment or materials to which has been attached a label, symbol, or other identifying mark of an organization that is acceptable to the authority having jurisdiction and concerned with product evaluation, that maintains periodic inspection of production of labeled equipment or materials, and by whose labeling the manufacturer indicates compliance with appropriate standards or performance in a specified manner.

Listed

Equipment, materials, or services included in a list published by an organization that is acceptable to the authority having jurisdiction and concerned with evaluation of products or services, that maintains periodic inspection of production of listed equipment or materials or periodic evaluation of services, and whose listing states that either the equipment, material, or services meets identified standards or has been tested and found suitable for a specified purpose.

Live parts

Electric conductors, buses, terminals, or components that are uninsulated or exposed and a shock hazard exists.

Nonincendive circuit

A circuit, other than field wiring, in which any arc or thermal effect produced under intended operating conditions of the equipment, is not capable, under specified test conditions, or igniting the flammable gas, vapor, or dust-air mixture. See Section 500-4(f) for details regarding this protection method allowable in Class I and II, Division 2 classified areas.

Qualified person

One familiar with the construction and operation of the equipment and the hazards involved.

Rainproof

Constructed, protected, or treated so as to prevent rain from interfering with the successful operation of the apparatus under specified test conditions.

Raintight

Constructed or protected so that exposure to a beating rain will not result in the entrance of water under specified test conditions.

Watertight

Constructed so that moisture will not enter the enclosure under specified test conditions.

Weatherproof

Constructed or protected so that exposure to the weather will not interfere with successful operation.

Applications

AUTOMOTIVE

Chemical washdown areas
Conveyors
Cylinder end-of-stroke indication
Eye wash stations
Marmac position sensing
Paint incineration damper indication
Paint mixing valves
Paint spray areas
Part present indication
Pneumatic and hydraulic clamping and welding fixtures
Positioning and indexing
Powerhouse (see Power Generation)
Safety showers
Speed control on conveyors

CEMENT PLANTS

Bagging
Chutes
Conveyors
Crushers
Hopper doors
Kilns
Loaders
Machinery
Packaging
Valve position indication

CHEMICAL PROCESSING

Emergency showers
Eye wash stations
Filters
Hose Couplings
Transfer panels
Valve position indication

CONSTRUCTION

Concrete block mfg.
Concrete ready mix trucks (counting revolutions of drum)
Cranes

ELEVATORS/ESCALATORS

Leveling switch in mining elevators

EQUIPMENT

On all equipment where the value of the switch is judged by its performance and long life

FLUID POWER

Cylinders
Valves

FOOD PROCESSING

Canning/bottling equipment
Conveyors
Cylinder indication
Freezers
Labelers
Material handling
Mixers
Ovens
Packaging equipment
Scales
Showers and eyewash stations
Valve position indication

FOUNDRIES

Conveyors
Crane
Dampers
Ladle positioning
Mold positioning
Shakers
Showers and eyewash stations

GLASS

Conveyors
Limits in all high heat areas
Mixers

LUMBER AND WOOD PRODUCTS

Conveyors
Eyewash stations
Sawdust bins
Saws
Ventilation equipment

MACHINERY

Car wash
Commercial laundry

Compacting

Engraving
Freezing
Gluing
Heavy Equipment (Komatsu, John Deere, Hyundai, etc.)
Lubricators
Mixing
Printing
Other machinery dealing with abrasive, explosive, corrosive or otherwise "hard to handle" environments
Rock crushing

MATERIAL HANDLING

Baggers/Balers
Bulk loading/unloading equipment
Conveyors
Crating equipment
Labelers
Lifts
Packaging machines

MILITARY/MARINE

Ballast transfer pumps
Davits
Elevators
Elevator speed control
Hatch interlock
Safety interlocks
Shipboard cranes
Valve position indication

MINING

Any limit application
Conveyors
Cylinders
Dump bed up indication
Longwall equipment
Shower and eyewash stations
Track signal

GAS TRANSMISSION/DISTRIBUTION

Door security
Valve position indication

NUCLEAR POWER PLANTS

Fuel transfer systems
Valve position indication

OFF ROAD EQUIPMENT

Boom alignment
Cranes
Cylinders
Dump truck bed indication
Ore/coal pile reclaimers

OIL/GAS EXPLORATION

Off-shore sites
Sub-sea applications
Valve position indication

PETROLEUM REFINING

Interlocks
Motor phase monitoring
Shower and eyewash stations
Valve position indication

POWER GENERATION

Air preheaters
Air preheater blowers
Ash bins
Ash handling valves
Bag houses
Barge unloaders
Blow down valves
Boiler feed pump recirculation valve
Boiler oil injectors
Bottom ash valves
Burner valves
Coal car dumpers
Coal feeders
Coal handling apparatus
Coal pulverizing swing valves
Coal samplers
Coal transport conveyors
Conveyors
Dampers
Damper valves
Economizers
Feedwater heater level detection
Fly ash valves
Hopper gates

Igniters
Louvered dampers
Master trip valves
Pyrite gates
Pulverizer and pulverizer valves
Scrubber valves
Showers and eyewash stations
Soot blowers
Steam valves
Stokers
Stop control valves
Turbine control valves
Ventilator valves
Wallblowers
Water de-mineralization valves

PULP AND PAPER

Agitators
Conveyors
Mixers
Shower and eyewash stations
Speed monitors
Valve position indication

RAILROADS

Bridges (draw and swing)
Car Maintenance Eqpt.
Couplers
Cranes
Crossing gates
Track maintenance vehicles & machinery
Track manipulation equipment (Railway Technologies)

SOLID WASTE DISPOSAL/CO-GENERATION

Conveyors
Cranes
Dampers
Valve position indication
Ventilation equipment

STEEL MILLS

Bullwheels
Cold rolling units
Conveyors
Cranes
Dampers
Draw benches
Fans
Hot mill applications
Shower and eyewash stations
Track monitors
Valve position indication

TIRE AND RUBBER

Any machinery handling carbon black
Conveyors
Curing presses
Cylinder end-of-stroke indication
Shower and eyewash stations
Tire mold closure interlocks
Tire scrivers

TOOL & DIE

Plastic injection molding
Aluminum die-casting
Rubber molding
High temperature applications

TRANSPORTATION EQUIPMENT

Airport fuel transfer equipment
Davits
Hangar doors
Hatch interlocks
K-Loaders
Passenger jetways
Scissor lifts
Shipboard cranes
Valve position indication
Vehicle interlocks

WASTE WATER TREATMENT

Agitators
Clarifiers
Clutches
Shower and eyewash stations
Sluice gates
Valves

SOOT BLOWER POSITION INDICATION

Wherever power is generated, whether it is at a power generation station or a pulp and paper facility, soot blowers are used to eliminate slag buildup from the inside wall of a boiler. The lance of the soot blower penetrates the side of the boiler wall and extends inside. As it enters the boiler, the lance rotates in a clockwise motion spraying high pressure steam from the end of the lance back toward the boiler wall. This high pressure spray removes the slag in a circular pattern that enlarges as the lance extends further into the boiler. After the lance is fully extended, it retracts and rotates counter-clockwise to its original inactive state until a predetermined time when the process starts again. Depending on the size of the boiler, there can be as many as 60 soot blowers to service one boiler!

As you might imagine, the area in which the soot blowers operate is a demanding environment. High temperature and physical abuse make mechanical limit switches a constant maintenance headache. If a soot blower is out of service, the boiler wall is not being cleaned and as a result, power is not being generated efficiently. Translation: downtime, maintenance costs and lost revenue.

Fortunately, GO Switch has the solution. Each soot blower can be retrofitted using two Double Pole, Double Throw 80 Series GO Switches and one (1) AMS4 target magnet. As the soot blower lance extends and retracts into the boiler, the target magnet travels to the sensing area of each GO Switch, providing maintenance-free, fit and forget position indication.

The GO Switch is wired like a mechanical switch so existing wiring can be used for easy installation. Since the GO Switch does not depend on lever arms or internal moving parts, maintenance is immediately eliminated. This has been field tested and proven in thousands of applications already.

AUTOMOTIVE SKID CONVEYOR INDICATION

Automotive manufacturers need reliable position indication of body skids along the skid conveyor system. The critical areas are at the entrance, exit, and even inside of the paint-drying ovens where temperatures can reach close to 400°F. Mechanical limit switches and inductive proximity switches cannot withstand the heat or the physical abuse of this application. Fortunately...

GO Switch has the answer.

We recommend our stainless steel high temperature 10 Series GO Switch with extended sensing, and a 400°F continuous temperature rating.

The GO Switch will provide reliable maintenance-free position indication in this tough application.

Contact the paint shop supervisor, electrical engineers, and/or maintenance people responsible for the paint booth. They will be glad you called!

GRAIN BIN OPEN/CLOSED GATE POSITION

Grain elevators need an explosion-proof sensing device to signal when the slide gate of a grain bin is fully closed. This permits grain to be fed into the bin without waste.

The switch not only had to be explosion-proof, but also had to withstand dirty and dusty conditions.

A GO Switch was mounted on a stainless steel bracket, 1/4" below the moving rack drive. This allows 1/8" of play in the drive movement, while providing accurate sensing of the position of the bin gate.

The dependable GO Switch costs less than other explosion-proof limit switches.

BAR SCREEN TRASH RAKES FOR WATER TREATMENT

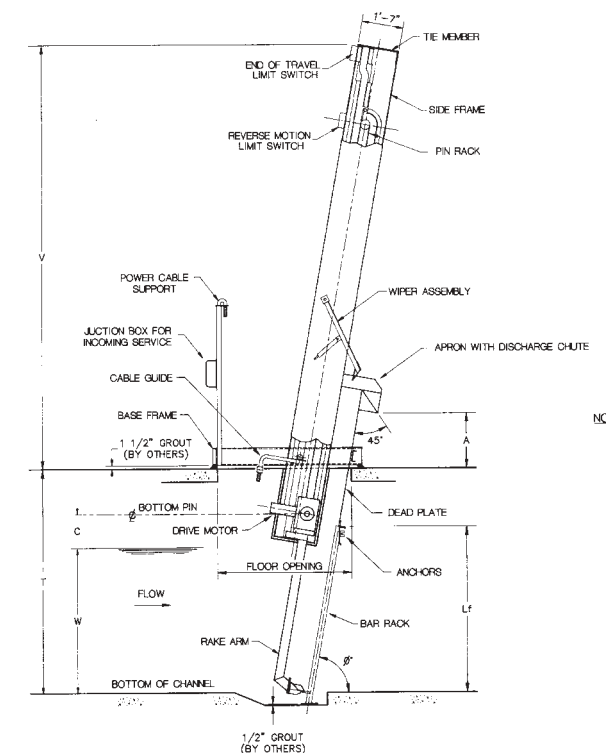

Bar screens are typically used in the intake channels of water treatment plants to remove solid debris from the water to prevent damage of subsequent equipment. When debris has accumulated on the screen, cleaning is required. It is done with a trash rake that is usually mounted in front of the screen on a support frame. Some of these trash rakes are manually operated and most are motor propelled so an operator only has to push a button to activate the rake. Some are activated by a timer. The rake goes through a cycle descending in front of the screen to the bottom moving towards the screen and then moving upward transporting the accumulated debris to a discharge chute where a container or a conveyor takes it away.

The motor operated trash rakes usually have two limit switches on them mounted to the support frame well above the water level. The end-of-travel limit switch defines the exact position at which the assembly will stop at the end of the cycle. The overload protection switch is activated when the rake comes in contact with an obstruction in the screen too large for it to remove.

Stainless steel 10 series or 80 series are the best limit switches for these applications. The harsh and moist environments in water treatment plants are too much for mechanical or solid state switches. Often the switches must be explosion proof and magnets must be used as targets because of the variation in the traveling rake position.

Water treatment plants are in a number of facilities including:

- Electrical generating stations
- Chemical processing plants
- Plastics manufacturing plants
- Food processing plants
- Industrial plants
- Pulp and paper mills
- Irrigation projects
- Oil refineries
- Sewage treatment plants
- Fish conservation projects
- Flood control pumping stations

REFUSE TRUCKS

Refuse trucks have as few as three switches and as many as ten switches per truck. The most common competitive switches used are mechanical lever-arm and push-button limit switches. Some trucks incorporate electronic proximity sensors.

Limit switch/sensor failures are prevalent in the refuse collection business. These switch/sensor failures are attributed to mechanical wear and tear, moisture-ingression, corrosion and temperature extremes.

Vehicles out of service for any period of time cause lost revenue.

GO Leverless Limit Switches will prevent these failures and downtime while reducing maintenance costs.

Visit the refuse collection companies in your area. They will be glad you called!

- LS1 = Normally open: held closed when side door is closed and latched.
- LS2 = (7 & 8 normally closed) (1 & 2 normally open): switches at end of packer stroke.
- LS3 = Normally closed: opens when tailgate is latched.
- LS4 = Normally closed: opens when tailgate is latched.
- LS5 = Normally closed: opens when packer is fully retracted.
- LS6 = Normally open: (1 & 2 normally open) (5 & 6 normally open): closes when arms are above cab.
- LS7 = Normally closed: opens when top door opens.

SAFETY SHOWERS AND EYEWASH STATIONS

In an emergency first-aid is crucial and according to the OSHA Plant Safety regulations; Subpart G-Occupational Health and Environmental Control; Section 1910.94, Paragraph (d) (9) (vii):

(vii) Near each tank containing a liquid which may burn, irritate, or otherwise be harmful to the skin if splashed upon the worker's body, there shall be a supply of clean cold water. The water pipe (carrying a pressure not exceeding 25 pounds) shall be provided with a quick opening valve and at least 48 inches of hose not smaller than three-fourths inch, so that no time may be lost in washing off liquids from the skin or clothing. Alternatively, deluge showers and eye flushes shall be provided in cases where harmful chemicals may be splashed on the body.

Deluge Showers and eye flushes are plentiful in chemical processing facilities How are the proper personnel notified should an emergency occur? Flow switches are used, but have corrosion and freezing problems.

GO Switch has the answer.

The GO Switch VIP for deluge showers and eye flushes can be mounted on any new or existing unit. Using the GO DPDT 80 Series switch allows for flexibility in signalling the proper personnel. For example, when the shower or eye flush valve is opened the GO Switch can signal the central control room and first-aid personnel simultaneously, or signal the control room and sound an alarm. When personal injury occurs time is of the essence.

Reference Material

Type 1	General Purpose	indoor	accidental contact (cage or skeleton) will not rust
Type 2	Drip-proof	indoor	limited amounts of falling water and dirt (not dust-tight) will not rust
Type 3	Dust-tight, rain-tight	outdoor	windblown dust, rain, sleet, and undamaged by external ice formation
Type 3R	Dust-tight, rain-tight	outdoor	same as type 3 above, plus diverts water from live parts, provision for drainage, will not rust
Type 3S	Dust-tight, rain-tight	outdoor	same as type 3 above, operation of external mechanism when ice laden, will not rust
Type 4	Water-tight/dust-tight	indoor/ outdoor	windblown dust and rain, splashing water, and hose directed water, undamaged by ice formation, will not rust
Type 5	Dust-tight	indoor	dust and falling direct, will not rust
Type 6	Water-tight, dust-tight	indoor/ outdoor	temporary entry of water during limited submersion (6 ft. for 30 min), undamaged by formation of ice, will not rust
Type 6P	Water-tight/dust-tight	indoor/ outdoor	same as type 6 above plus prolonged submersion at 6 psig, will not rust
Type 7	Explosion proof Cl I, Gps A, B, C, D	indoor	Hazardous locations: protection against corrosive effects of liquids and gases
Type 8	Explosion proof Cl I, Gps A, B, C, D	indoor/ outdoor	Hazardous locations: protection against corrosive effects of liquids and gases; contacts or connections immersed in oil
Type 9	Explosion proof Cl II, Gps E or G	indoor	Hazardous locations: dust-tight, hazardous dust
Type 10	Hazardous Locations	indoor	(MSHA) Mine Safety and Health Adm. per 30 C.F.R., Part 18
Type 11	Oil-tight/Corrosion	indoor	protection from corrosive effects of gases and liquid dripping, seepage and external condensation of corrosives, oil immersion
Type 12	Oil-tight/Dust-tight	indoor	fibers, lint, dust and light splashing, seepage, and dripping condensation of non-corrosive liquids
Type 12K	Oil-tight/Dust-tigh	indoor	same as type 12 above, enclosure has knockouts
Type 13	Oil-tight/Dust-tight	indoor	dust, spraying of water, oil and corrosive coolant, oil resistant gaskets

Approval Agencies

This group defines the options or approvals which may be required for a particular application. Safety requirements, the demands of the machinery on which the switch will be used, or the type of environment will all play a role in determining the type of approval needed.

	Underwriters Laboratories (UL) DEMCO (Subsidiary of UL)	Our file number is E79070 for hazardous location switches and E81878 for general purpose switches.
	Mine Safety and Health Administration (MSHA)	Our file number is X/P-1504-1 November 20, 1984.
	Factory Mutual (FM)	Factory Mutual approved switches are listed in the Factory Mutual Approved Guide.
	Canadian Standard Association (CSA)	Our file number is LR-24226, (CSA) which includes most GO® Switches except special models.
	Standards Association of Australia (SAA) Ex109.	Our file number is EL/29:78062/M90
	British Approvals Service for Electrical Equipment in Flammable Atmospheres (BASEEFA) (Cenelec)	Our file number is Ex 89C1233X for use in Zone 1 Hazardous areas.

UL Hazardous Locations

**Class I
Flammable Gases, Vapors or Liquids
Class I Area Classification**

Division 1:
Where ignitable concentrations of flammable gases, vapors, or liquids can exist all of the time or some of the time under normal operating conditions.

Zone 0:
Where ignitable concentrations of flammable gases, vapors or liquids can exist all of the time or long periods of time under normal operating conditions.

Division 2:
Where ignitable concentrations of flammable gases, vapors or liquids are not likely to exist under normal operating conditions.

Zone 1:
Where ignitable concentrations of flammable gases, vapors or liquids can exist some of the time under normal operating conditions.

Zone 2:
Where ignitable concentrations of flammable gases, vapors, or liquids are not likely to exist under normal operating conditions.

Class I Groups

Division 1 & 2
A (acetylene)
B (hydrogen)
C (ethylene)
D (propane)

Zone 0, 1 & 2
IIC (acetylene & hydrogen)
IIB (ethylene)
IIA (propane)

Class I Temperature Codes

Division 1 & 2
T1 ($\leq 450^{\circ}\text{C}$)
T2 ($\leq 300^{\circ}\text{C}$)
T2A, T2B, T2C, T2D ($\leq 280^{\circ}\text{C}$, $\leq 260^{\circ}\text{C}$, $\leq 230^{\circ}\text{C}$, $\leq 215^{\circ}\text{C}$)
T3 ($\leq 200^{\circ}\text{C}$)
T3A, T3B, T3C ($\leq 180^{\circ}\text{C}$, $\leq 165^{\circ}\text{C}$, $\leq 160^{\circ}\text{C}$)
T4 ($\leq 135^{\circ}\text{C}$)
T4A ($\leq 120^{\circ}\text{C}$)
T5 ($\leq 100^{\circ}\text{C}$)
T6 ($\leq 85^{\circ}\text{C}$)

Zone 0, 1 & 2
T1 ($\leq 450^{\circ}\text{C}$)
T2 ($\leq 300^{\circ}\text{C}$)
T3 ($\leq 200^{\circ}\text{C}$)
T4 ($\leq 135^{\circ}\text{C}$)
T5 ($\leq 100^{\circ}\text{C}$)
T6 ($\leq 85^{\circ}\text{C}$)

**Class II
Combustible Dusts
Class II Area Classification**

Division 1:
Where ignitable concentrations of combustible dusts can exist all of the time or some of the time under normal operating conditions.

Division 2:
Where ignitable concentrations of combustible dusts are not likely to exist under normal operating conditions.

Class II Groups

Division 1 & 2
E (metals - Div. 1 only)
F (coal)
G (grain)

Class II Temperature Codes

Division 1 & 2
T1 ($\leq 450^{\circ}\text{C}$)
T2 ($\leq 300^{\circ}\text{C}$)
T2A, T2B, T2C, T2D ($\leq 280^{\circ}\text{C}$, $\leq 260^{\circ}\text{C}$, $\leq 230^{\circ}\text{C}$, $\leq 215^{\circ}\text{C}$)
T3 ($\leq 200^{\circ}\text{C}$)
T3A, T3B, T3C ($\leq 180^{\circ}\text{C}$, $\leq 165^{\circ}\text{C}$, $\leq 160^{\circ}\text{C}$)
T4 ($\leq 135^{\circ}\text{C}$)
T4A ($\leq 120^{\circ}\text{C}$)
T5 ($\leq 100^{\circ}\text{C}$)
T6 ($\leq 85^{\circ}\text{C}$)

**Class III
Ignitable Fibers & Flyings
Class III Area Classification**

Division 1:
Where easily ignitable fibers or materials producing combustible flyings are handled, manufactured or used.

Division 2:
Where easily ignitable fibers are stored or handled.

Class III Groups

Division 1 & 2
None.

Class III Temperature Codes

Division 1 & 2
T3B, T3C ($\leq 165^{\circ}\text{C}$, $\leq 160^{\circ}\text{C}$)
T4 ($\leq 135^{\circ}\text{C}$)
T4A ($\leq 120^{\circ}\text{C}$)
T5 ($\leq 100^{\circ}\text{C}$)
T6 ($\leq 85^{\circ}\text{C}$)

Note: Article 503 of the NEC limits the maximum temperature codes for Class III equipment to 165°C for equipment not subject to overloading and to 120°C for equipment that may be overloaded.

Hazardous Locations Markings

Class I, II & III, Division 1 & 2 (U.S. & Canada) -- This marking would include:

Class(es), Division(s), Gas/Dust Group(s), Temperature Code. *Example:* Class I, Division 1, Groups C & D, T4A.

Class I, Zone 0, 1 & 2 (U.S. & Canada) -- This marking would include:

Method A: For Zone Listings based on UL 2279 or the CSA-E79 Series Class, Zone(s), Ex, Protection Method(s), Gas Group, Temporary Code. *Example:* Class I, Zone 1, Ex de IIB T4.

Method B: For Zone Listings based on UL or CSA Division Certification Documents Class, Zone(s), Gas Group, Temperature Code.

Example: Class I, Zone 1, Group IIB T4.

Note: For U.S. Zone Listings based on UL 2279, Article 505 of the 1999 NEC requires that the "Ex" element of the marking string shall read "AEx."

Note: For Canadian Zone Listings based on the CSA-E79 Series, the "Class" and "Zone" elements of the marking string are optional.

Zone 0, 1 & 2 (IEC only) -- This marking would include:

Ex, Protection Method(s), Gas Group, Temperature Code. *Example:* Ex de IIB T4.

Zone 0, 1 & 2 (Europe only) -- This marking would include:

EEX, Protection Method(s), Gas Group, Temperature Code. *Example:* EEX de IIB T4.

ANSI/UL 781	Portable electric lighting units for use in hazardous (classified) locations.
ANSI/UL 783	Electric flashlights and lanterns for use in hazardous (classified) locations.
ANSI/UL 823	Electric heaters for use in hazardous (classified) locations.
ANSI/UL 844	Electric lighting fixtures for use in hazardous (classified) locations.
ANSI/UL 877	Circuit breakers and circuit-breaker enclosures for use in hazardous (classified) locations.
ANSI/UL 886	Outlet boxes and fittings for use in hazardous (classified) locations.
ANSI/UL 894	Switches for use in hazardous (classified) locations.
ANSI/UL 913	Intrinsically safe apparatus and associated apparatus for use in Class I, II and III, Division I, hazardous (classified) locations.
ANSI/UL 1002	Electrically operated valves for use in hazardous (classified) locations.
ANSI/UL 1010	Receptacle-plug combinations for use in hazardous (classified) locations.
ANSI/UL 1067	Electrically conductive equipment and materials for use in flammable anesthetizing locations.
ANSI/UL 1203	Explosion-proof and dust-ignition-proof electrical equipment for use in hazardous (classified) locations.
ANSI/UL 1207	Sewage pumps for use in hazardous (classified) locations.
UL 1604	Electrical equipment for use in Class I and II, Division 2, and Class III hazardous (classified) locations.
UL 2208	Solvent distillation units.
UL 2225	Metal-clad cables and cable-sealing fittings for use in hazardous (classified) locations.
ANSI/UL 2279	Electrical equipment for use in Class I, Zone 0, 1 and 2 hazardous (classified) locations.

Ambient Temperature

The temperature for a medium, such as gas or liquid, surrounding an object.

Analog Signal

A signal in which the data is represented or transmitted in continuously varying quantities, as opposed to a digital signal.

ANSI

Abbreviation for American National Standards Institute.

AWG

Abbreviation for American Wire Gauge; based on circular mil system.

AWM

Appliance Wiring Material.

Axial Motion

A motion of the target along the reference axis.

BASEEFA

Abbreviation for British Approvals Service for Electrical Equipment in Flammable Atmospheres.

CEE

Abbreviation for the International Commission on Rules for the approval of Electrical Equipment.

CE Mark

A trademark that allows a manufacturer trade privileges with the European Union. The CE Mark, by responsibility of the manufacturer, insures that certain directives have been met through testing and documentation.

CENELEC

European Committee for Electrotechnical Standardization.

C-UL

Products bearing this mark are a UL listed device, and tested to CSA standards.

Contact Bounce

A condition that can occur with switching circuits in which the movable contacts close against the stationary contacts with enough energy to "bounce" and reopen the contacts. This may occur several times, very rapidly, during a contact closure.

Contact Pressure

The amount of force holding the movable and stationary contacts together.

CSA

Abbreviation for Canadian Standards Association.

DEMCO

A subsidiary of Underwriter's Laboratories.

Differential (Hysteresis) (Reset)

The distance which a target must move from the sensing point in order to allow the switch to reset.

Differential Travel

A distance between the operating and release points.

Digital Signal

A signal in which the data is transmitted or represented by a series of discrete pulses or steps of constant amplitude.

Dry Circuit

A circuit in which the open circuit voltage is 0.03V or less and the current is 200 mA or less. At such low levels, the current is not able to break through the film of oxides, sulfides or other films which may build up on the contact surfaces.

Environmental Seal

A seal created by gaskets, seals, potting or other means, designed to keep out contamination which might reduce performance. An environmental seal is sometimes referred to as a "factory seal."

Explosion Proof

The property of being able to contain an explosion within the sensor or housing.

Frequency

The number of cycles completed by an alternating current in one second. The newest term Hertz, abbreviated "Hz," is equivalent to "cycles per second."

Hermetic seal

A permanent seal created by fusion, soldering, welding, brazing or other means, to prevent the transmission of gases. A hermetic seal is also referred to as "helium tight," "leak tight," or "vacuum tight." For most applications, a hermetic seal is one where the leakage rate is less than 1×10^{-8} cubic centimeters per second of helium, at a differential of one atmosphere.

Hi-Pot

A device used to place a high voltage across an insulator, to test its insulating properties. The typical Hi-Potential Breakdown Test specified by CSA and UL requires that the voltage be twice the rated voltage, plus 1000 volts, plus 20% of that total. For example, a 600v switch would be tested at $[(600 \times 2) + 1000] \times 1.2 = 2640$ volts. This voltage is placed across the insulator for 1 second, if the insulator doesn't break down, it is considered acceptable.

Hysteresis (Differential) (Reset)

The distance which a target must move from the sensing point in order to allow the switch to reset.

IEC

Abbreviation for the international Electrical and Electronics Engineers.

(IS) Intrinsically Safe

Intrinsic safety may be attained through integral circuitry or an appropriately sized barrier, both of which are current limiting devices. The on-board circuitry, or barrier, is designed for the area classification which the monitoring device is to be used. The basis of intrinsic safety is to limit the amount of current through a device, so that if there is exposure to the surrounding atmosphere there is not sufficient heat generated to ignite that atmosphere.

ISO

Abbreviation for the International Standards Organization.

Latching Condition

A condition where the switch will not reset to its unoperated mode. It must be operated, then reset, in two separate operations.

Lateral Motion

A motion of the target perpendicular to the reference axis.

Leakage Current

Minute amounts of current which flow through a switch even in the unoperated state. Leakage current occurs with electronic switches since they require an external power supply. GO® Switches do not require a power supply and, therefore have no leakage current.

MSHA

Abbreviation for Mine Safety Health Administration

NEMA

Abbreviation for the National Electrical Manufacturers Association.

NEC

National Electric Code.

Non-incendive

Non-incendive equipment contain components that do not allow arcs or sparks to ignite concentrations of flammable gases. One method of producing a non-incendive switch is by sealing off the contact chamber with a hermetic seal so that a flammable gas cannot enter into the arcing / sparking area of the switch.

Normally Closed Circuit

Circuit which passes current when the GO Switch is not actuated. Symbolized by N/C.

Normally Open Circuit

Circuit which passes current when the GO Switch is actuated. Symbolized by N/O.

Operating Distance

A distance at which the target under its axial or lateral approaching causes the switch to operate. An axial operating distance is a distance between an operating point and the sensing face; a lateral operating distance is a distance between an operating point and the reference axis.

(PPM) Pulses Per Minute

Refers to applications, particularly in motion control circuits on rotary applications, where several operations of a switch take place with each revolution of the actuator device. If the actuator turns at "X" revolutions per minute and there are "Y" operations per revolution, the pulses per minute rate would be "X" x "Y" PPM.

PSI

Pounds per square inch. A unit of measure for pressure on a given surface.

PVC

Polyvinyl chloride.

Proximity Switch

A position switch which is operated without mechanical contact with a moving target.

Rated Temperature

Maximum temperature at which an electric component can operate for extended periods without breaking down due to heat.

Rated Voltage

Maximum voltage at which an electric component can operate for extended periods without undue degradation or safety hazard.

Reference Axis

An axis perpendicular to the sensing face and passing through its center.

Release Point

A position of the target at its axial or lateral moving away from the switch when it returns to non-operating state.

Repeatability

Ability to perform the same task operating parameters, consistently, time after time.

Reset (Differential) (Hysteresis)

The distance which a target must move from the sensing point in order to allow the switch to reset.

Response Time

The amount of time required for the switch to move from N/C position to N/O position, or vice versa.

RTV

Abbreviation for Room Temperature Vulcanizing.

SAA

Abbreviation for Standards Association of Australia.

SAE

Abbreviation for Society of Automotive Engineers.

Same Polarity Only

On DMDB switches the like terminals must be wired with the same voltage polarity.

Sensing Area

That location marked on a GO® Switch that is most sensitive to a ferrous or magnetic target.

Sensing Distance Range

Maximum gap between switch and target when the switch first operates; the trip point.

Sensing Face

A surface of the switch through which the magnetic field interact with a moving target and causes the switch operate.

SO Cable

A cable designed for industrial use that has the PVC insulated lead wires protected by a rubber (usually neoprene) jacket.

Standard Target

A specified object used for making comparative measurements of the operating and differential distances.

TEW

Thermoplastic Equipment Wire.

Temperature Rating

Maximum and minimum temperature at which an insulating material can be used in continuous operation without loss of basic properties.

UL

Abbreviation for Underwriter's Laboratories.

Voltage Drop

The amount of voltage across a pair of closed contacts. In GO Switches, this voltage drop is extremely low, compared to solid state switches.

Voltage Rating

The highest voltage that may be continuously applied to an electrical device in conformance with standards or specifications.

Conversion Factors

PSI x 27.71 = in. H₂O
 PSI x 2.036 = in. Hg
 PSI x 703.1 = mm H₂O
 PSI x 51.75 = mm Hg
 PSI x .0703 = kg/cm²
 PSI x .0689 = bar
 PSI x 68.95 = mbar
 PSI x 6895 = Pa
 PSI x 6.895 = kPa

Note: conversion factors are rounded.

 Standard Atmosphere Pressure is 15 psi (14.7)
 15 Pounds = 1 Atmosphere
 Square Inch

Bar is a Unit of Pressure Equal to 1 Atmosphere or
 Approx. 15 Pounds
 Square Inch

*Conversions are approximate for convenience of users.

Fraction/Decimal/Millimeter Conversion Chart

Temperature conversion formula

$$C = \frac{5}{9} (F - 32)$$

$$F = \frac{9}{5} C + 32$$
